

9th Lunch Seminar 24.04.14

12:00-12:45 Kristine Bonnevis House, Blindern – Auditorium 2

Life after PhD - Where do people work?

The PhD-forum at the Department of Biosciences in collaboration with Biostruct invites to a spring seminar-series about life after the PhD. People that have taken a PhD in life science, and now work outside of academia come and tell about their experience. What have they done after the PhD, where do they work, and how did they end up there? What kind of skills apart from the scientific background has been valuable to them?

Program:

12:00

Welcome - coffee and cake

12:15 - 12:45

Talk by Kjetil Lysne Voje

- Centre for Ecological and Evolutionary Synthesis, UiO

Kjetil Lysne Voje has taken his PhD within evolution biology at University Of Oslo with the title "The relative effects of adaptation and constraint on phenotypic evolution" under the supervision of Thomas F. Hansen. In 2008-2009 he went to South-America, including the Galapagos Islands exploring the same evolutionary diversity observed by Darwin himself 170 years earlier. Today he is a Postdoc at the Centre for Ecological and Evolutionary Synthesis, continuing his investigations of how phenotypes have evolved throughout evolution.

All from Department of Biosciences and BioStruct are welcome, and we encourage our master students to come.

The talk is open for all interested participants. Coffee and cakes will be served from 12.00

Norwegian Graduate school in Structural Biology -A collaboration between 5 universities
