[Health Science Faculty Resources](#) > PRPP assessment of Terrence

PRPP assessment of Terrence

Description

In this analysis you will meet Terrence, a 51 year old man who has a mental illness. Terrence lives alone in a small unit. He has a lot of support from his family, particularly in meal preparation. Terrence has a problem regulating his food intake this is the reason for his sister bringing a daily supply of food. He also has a support worker who comes once...

[PRPP assessment of Terrence](#)

In this analysis you will meet Terrence, a 51 year old man who has a mental illness. Terrence lives alone in a small unit. He has a lot of support from his family, particularly in meal preparation. Terrence has a problem regulating his food intake this is the reason for his sister bringing a daily supply of food. He also has a support worker who comes once a week and helps him with activities such as housework and shopping. He attends a day centre twice a week for a gardening group and a music therapy group, both activities he enjoys. Terrence is under the care of a community mental health team which is the cameraman. The assessment is being done by Barbara, an occupational therapist. The purpose of the assessment was to identify some of the specific problems Terrence is having with occupational performance and to develop intervention strategies.
