

Surfing Christmas and Chemistry

Molecules and merriment, the sight of light in the night and other random walks through the Web

Richard Alan Engh

Professor in biomolecular and structure chemistry
Institute for chemistry, UiT – Norges arktiske universitet

Thursday 8. December 14.15-15.00

Teknologibyggget 2.017, UiT campus Tromsø,
or on Zoom: <https://uit.zoom.us/j/61108056744>

Abstract:

Asked for a not-too-serious presentation appropriate for December, I decided to try to understand the Meaning of Christmas from a Chemistry point of view. Naturally, I turned to Google for inspiration, and indeed a search for "Christmas and Chemistry" returns a vast and rich treasure trove of science and culture.

In this presentation, I wander through some of my favorite finds, including limonene, Munch, hemoglobin, the conscious perception of blue, Sheldon Cooper, and Charles Dickens.

Norsk kjemisk selskap Nord-Norge welcomes all who are interested to attend this year's exciting Christmas presentation!
